REGIONAL PLAYOUT COMPLIANCE MEMORANDUM
Issued for transmission date 2029-03-01
Document class: normative. This memorandum is the only place the three settlement constants below are published.

SECTION 1 - SETTLEMENT CONSTANTS
separation_minimum_positions = 3
billing_grain_seconds = 5
regulatory_minutes_per_clock_hour = 2

The separation minimum is counted in admitted positions inside one break. Two admitted spots that carry the same separation class must sit at least that many positions apart, so a minimum of two bars adjacent positions.

The billing grain is the whole number of seconds that a delivered spot is billed in. A delivered spot is billed for the smallest whole number of grains that covers its delivered frames, and a delivery that lands exactly on a grain boundary bills that many grains and no more.

The regulatory minutage is the permitted advertising minutes inside one clock hour of the broadcast day. The cap in channel frames is the whole number of frames that those minutes occupy at the channel rate, taken toward zero. An hour whose advertising frames exceed the cap is a breach; an hour that lands exactly on the cap is not.

SECTION 2 - PERMITTED MINUTAGE BY MARKET AND CLOCK HOUR
Where a market and clock hour is listed below, its permitted minutes govern that hour and replace the Section 1 figure. A market and clock hour not listed keeps the Section 1 figure.

H28 | DP_OVERNIGHT | band_16 | 19
H29 | DP_OVERNIGHT | band_26 | 44

SECTION 5 - TERMS USED IN THIS MEMORANDUM
admitted position: the one based index of a spot inside a break
advertising frames: channel frames occupied by admitted spots
avail: the commercial capacity published against one break
break: a conditioned splice point inside a transmitted slot
broadcast day: the day that opens at the published day start
channel frame: one frame at the channel transmission rate
clock hour: one whole hour measured from the broadcast day start
conform: the frame exact placement of material into the day
delivered frames: the frames an admitted spot actually occupies
drop frame: the timecode labelling that skips frame numbers
grain: the whole second unit a delivered spot is billed in
junction: a point in the day where a slot start is published
make good: an obligation raised against an undelivered spot
market: one regional feed of the channel
minor unit: the smallest indivisible unit of a currency
minutage: advertising time measured inside one clock hour
overrun: placement later than a fixed junction requires
separation class: the competitive grouping of an advertiser
slot: one scheduled transmission of one canonical asset
snap: the movement of a break onto an index frame
substitute: material carried in place of a blacked out slot
underrun: placement earlier than a fixed junction requires
