ARENA LADDER PAYOUT & UNCERTAINTY COST POLICY - 2026 SEASON 2
Competitive Integrity & Settlement Working Group

1. SCOPE
This memo fixes the payout and uncertainty constants used by the quarterly weighted arena-ladder settlement. Values here are authoritative and are deliberately NOT duplicated in any plaintext file in the export set.

2. MANUAL-REVIEW COST
Each match flagged by the calibrated smurf detector (yhat = 1) incurs a manual review. The inspection unit cost is 1613 credits per flagged match. It is charged per flagged match and weighted by the rarity weight before summation within a stratum.

3. F-BETA
The headline stratified quality metric uses F-beta with beta = 2.5, reflecting that a missed genuine clear (recall failure) is valued more than a false ban (precision failure). Compute F-beta from the OVERALL weighted precision and recall (ratio of weighted totals), never by averaging per-stratum F-beta for the overall line.

4. NET SETTLEMENT
Net settlement per stratum = rewarded_credits - review_cost_credits, before the smurf levy and settlement floor described in the levy addendum. Rewarded credits count only true positives (y = 1 and yhat = 1) times the per-stratum recovery factor; forfeited credits count only false negatives (y = 1 and yhat = 0).

5. CONFIDENCE INTERVALS
Report 95% Wilson score intervals on the Kish effective sample size n_eff = (sum w)^2 / sum(w^2), computed over the relevant weighted denominator subset (actual positives for recall, predicted positives for precision), with z = 1.959964.

6. TABLE - PER-LANE REVIEW STAFFING (reference only, not graded)

lane	reviewers	shift_hours	escalation_bps
