== Methodology appendix
Significance against the baseline uses the exact two-sided McNemar test on items eligible in the suite: b counts items the candidate gets right and the baseline wrong, c the reverse; p = min(1, 2 * sum over i = 0..min(b, c) of C(b + c, i) / 2^(b + c)), and p = 1 when b + c = 0. A suite is improved when p < 0.05 and b > c, regressed when p < 0.05 and c > b, otherwise no_change.
Judge models: jm-1 writes A, B or T for first shown, second shown, tie; jm-2 writes 1, 2 or 0. jm-3 (rescored export) is not approved. The presentation field of the rescored export says whether slot 1 showed the candidate (slot1_candidate) or the baseline (slot1_baseline); in ordering AB the candidate is shown first.
Boundaries: the window is half-open; a row emitted exactly at its job's seal is inside the seal; an approval exactly at the cutoff counts; contamination thresholds and tolerances are inclusive.
Leaderboard ties are broken by higher unrounded pass@1, then by model alias in ascending order.
The baseline is graded with grader g3 and tokenizer ospsp with a 16384 token window.
== Per-source notes
baseline_reference.csv:
* Baseline rows for items with a counted contamination hit at or above the suite threshold take no part in metrics or significance.
* Baseline rows for items that are non-canonical members of a dedup cluster take no part in metrics or significance.
* Baseline rows for held-out items take no part in metrics or significance; held-out is the last exclusion reason.
* Baseline rows for items retired in the suite manifest take no part in metrics or significance.
* Some baseline_reference.csv rows name the item by its legacy item code (LCnnnnnn) instead of the item id; the crosswalk in the methodology appendix maps codes to item ids.
code_samples.jsonl:
* A code_samples.jsonl row emitted exactly at the seal instant is inside the seal (at or before).
eval_store.db:
* A eval_store.db row emitted exactly at the seal instant is inside the seal (at or before).
intent_predictions.csv:
* A intent_predictions.csv row emitted exactly at the seal instant is inside the seal (at or before).
judge_verdicts.jsonl:
* A verdict of T or 0 is a tie and is not a missing verdict.
* Verdicts from judge model jm-2 are written 1, 2 or 0 (first shown, second shown, tie); jm-1 writes A, B or T.
* A judge_verdicts.jsonl row emitted exactly at the seal instant is inside the seal (at or before).
* Judge verdicts name slot 1 or slot 2; which slot showed the candidate is recorded per job and item only in the presentation field of the rescored export.
judge_verdicts_rescored.jsonl:
* The presentation field (slot1_candidate or slot1_baseline) is the only record of which slot showed the candidate, and it is valid for judge_verdicts.jsonl, rerun_results.jsonl and manual_overrides.xlsx; slot1_baseline reverses the slot reading.
* judge can be upper-cased (JM-3).
* A presentation value of slot1_candidate for an item whose judge verdict is a tie is still the order of record.
* slot can be a string.
* jm-3 writes ties as null; a null verdict is a tie, not a missing row.
legacy_results.txt:
* A legacy_results.txt row emitted exactly at the seal instant is inside the seal (at or before).
manual_overrides.xlsx:
* slot can be text.
metric_definitions.pdf:
* Rows in continuation tables number ordinals from 1.
* Ordinals run from 0 to shard size minus 1 in the main table; ordinal 0 is the first item of the shard.
* Ordinals can be zero-padded to two digits.
* Shard numbers can be zero-padded to four digits.
rerun_results.jsonl:
* A rerun_results.jsonl row emitted exactly at the seal instant is inside the seal (at or before).
* Preference rerun verdicts name slot 1 or 2; the presentation order comes from the rescored export.
results_fleet_a.log:
* A results_fleet_a.log row emitted exactly at the seal instant is inside the seal (at or before).
results_fleet_b.log:
* A results_fleet_b.log row emitted exactly at the seal instant is inside the seal (at or before).
results_fleet_c.log:
* A results_fleet_c.log row emitted exactly at the seal instant is inside the seal (at or before).
scores_shard1.parquet:
* A scores_shard1.parquet row emitted exactly at the seal instant is inside the seal (at or before).
scores_shard2.parquet:
* A scores_shard2.parquet row emitted exactly at the seal instant is inside the seal (at or before).
