Annotation guidelines

Vote weights

Each counted vote weighs by the annotator's tier at submitted_at (latest TierHistory row effective at or before it): gold 3, silver 2, bronze 1, probation 0; an annotator without a tier at that time weighs 0 and an annotator id not in the roster (after the crosswalk) does not count. Votes submitted after the label cutoff do not count. The counted votes of every task attached to an example are pooled. Raw labels map to fraud, legit or unsure through the taxonomy of the annotator's vendor and the batch's guideline version; unsure votes do not count. If the fraud weight exceeds the legit weight the vendor label is 1, if lower 0, if equal unresolved. An example without counted votes has no vendor evidence.

Batch status

Votes of a task without a guideline version in the batch manifest do not count. Votes of a recalled batch do not count. Votes of an annotator who failed the gold check of a batch do not count for that batch. Withdrawn annotations do not count.

Relabel passes

Relabel passes are quality experiments; their labels are never used. Re-keyed VeriTask annotator ids resolve to roster ids through the crosswalk published with the batch B relabel export.

Table: Gold check results
