scoring_methodology.pdf

Scoring methodology for the Q3 2025 close

Base scores. A CVSS 3.x base score is computed from the vector with the CVSS 3.1 specification formulas. ISS = 1 - (1 - C)(1 - I)(1 - A).
Impact is 6.42 x ISS when scope is unchanged and 7.52 x (ISS - 0.029) - 3.25 x (ISS - 0.02)^15 when scope is changed. Exploitability is
8.22 x AV x AC x PR x UI. Weights: AV N 0.85, A 0.62, L 0.55, P 0.2; AC L 0.77, H 0.44; PR N 0.85, L 0.62, H 0.27 when scope is unchanged
and N 0.85, L 0.68, H 0.5 when scope is changed; UI N 0.85, R 0.62; C, I and A H 0.56, L 0.22, N 0. When impact is at most 0 the score is
0. Otherwise the score is Roundup(min(impact + exploitability, 10)) for unchanged scope and Roundup(min(1.08 x (impact + exploitability), 10))
for changed scope. For CVSS:3.1 vectors Roundup is the CVSS 3.1 Appendix A function: let i = round(x x 100000); when i is divisible by
10000 the result is i / 100000, otherwise (floor(i / 10000) + 1) / 10. For CVSS:3.0 vectors Roundup is the smallest number with one
decimal that is at least x. Severity bands: none 0.0; low 0.1 to 3.9; medium 4.0 to 6.9; high 7.0 to 8.9; critical 9.0 to 10.0.

Service weight. weight = tier weight x deploy factor, rounded half to even to 4 decimals. Tier weights: tier 0: 4.0, tier 1: 2.5, tier 2: 1.5, tier 3: 1.0. The deploy factor is
min(2, 1 + deploys / 365); it is 1 when deploys is null.

Remediation estimate. The estimate of an exposure is the estimate override of remediation_estimates.xlsx for the package and the pinned
version's major version with the latest effective date on or before 2025-09-30, when there is one. Otherwise it is base hours of the
severity x the complexity factor x the upgrade multiplier, rounded half to even to 2 decimals. Base hours: critical: 16, high: 8, medium: 4, low: 2, none: 1. The complexity factor is
the factor row below for the package and the pinned major version with the latest effective date on or before 2025-09-30, otherwise 1. The
upgrade multiplier is 3 when there is no fixed version, 2 when the fixed version's major version is above the pinned major version, and 1
otherwise.

Complexity factors
