sla_policy.pdf

Remediation SLA policy

Clock. days_open of an exposure counts business days from the day after its publication date to 2025-09-30 inclusive. The publication
date is the local date of the publication instant in the zone of the service's region (eu-west IE, us-central US, ap-south IN, ap-north JP, ap-southeast AU, global UTC). A business day is a Monday to Friday that is not a holiday of the service's region and not inside an in-force change freeze window of the service (change_freeze.ics; a window covers
the UTC dates in [start, end)). days_open is null when the publication is unknown.

Targets. sla_days by severity and tier:
critical: tier 0 7, tier 1 10, tier 2 15, tier 3 20 business days
high: tier 0 15, tier 1 20, tier 2 30, tier 3 45 business days
medium: tier 0 30, tier 1 45, tier 2 60, tier 3 90 business days
low: tier 0 60, tier 1 90, tier 2 120, tier 3 180 business days
none: tier 0 180, tier 1 180, tier 2 180, tier 3 180 business days
An in-force override below for the service and severity with the latest effective date on or before 2025-09-30 replaces the target.
breach is true when days_open is greater than sla_days; it is false when days_open is null.

Holidays:
eu-west: 2025-08-04
us-central: 2025-07-04, 2025-09-01
ap-south: 2025-08-15, 2025-09-17
ap-north: 2025-07-21, 2025-08-11, 2025-09-15, 2025-09-23
ap-southeast:
global: 2025-07-14, 2025-08-25
